

Matheus Pereira

Full Stack Software Engineer | React.js • TypeScript • Node.js | Scalable Web Applications • RESTful APIs • Agile & CI/CD

matheuspereira6464@gmail.com | <https://www.linkedin.com/in/matheus-pereira64/> | Amazonas, Brazil

Summary

Software Engineer with experience in designing and developing scalable web applications and RESTful APIs using **React.js**, **Next.js**, **TypeScript**, and **Node.js**. Delivered measurable business impact by developing real-time industrial monitoring solutions that reduced report generation time by 40% through live machine data collection and visualization in the SIM 4.0 platform. Led the optimization of the ITEGAM website, achieving over 50% faster page load times by improving frontend architecture and performance. Skilled in building high-performance user interfaces, integrating complex systems, and delivering maintainable full stack solutions in Agile environments. Passionate about software architecture, continuous learning, and creating user-centric products for global markets.

Experience

Software Project Lead

ITEGAM | Manaus, Brazil (On-site)

06/2025 – Present

Led Research, Development, and Innovation (R&D&I) software projects using React, TypeScript, Node.js, and SQL, delivering scalable Industry 4.0 solutions that enabled real-time machine data visualization and reduced report generation time by 40% through automated data collection and processing.

- Collaborated with cross-functional teams and stakeholders in Agile (Scrum) environments to define technical requirements, accelerate software delivery, and build maintainable, high-performance solutions that supported digital transformation initiatives across industrial and institutional projects.
- Developed and optimized enterprise web applications with React, Vue.js, TypeScript, JavaScript, and Node.js, improving application performance and delivering over 50% faster page load times by modernizing the frontend architecture and implementing performance optimization techniques.

Skills: TypeScript, JavaScript, Vue.js, React, Node.js, SQL, Git, Agile Methodologies (Scrum).

Full Stack Software Engineer

ITEGAM | Manaus, Brazil (On-site)

01/2025 – Present

Developed and maintained Industry 4.0 web applications using React, TypeScript, Node.js, SQL, and REST APIs, enabling real-time machine data visualization and reducing report generation time by 40% through automated data collection and processing.

- *Collaborated with cross-functional teams in Agile (Scrum) environments to deliver high-quality software, implement new features, and optimize existing applications following modern engineering best practices.*
- *Modernized and optimized institutional web platforms with React, Next.js, and TypeScript, achieving over 50% faster page load times by improving frontend architecture, application performance, and asset optimization.*
- *Built scalable REST APIs and integrated enterprise systems, ensuring reliable communication between frontend applications, industrial equipment, and databases while improving system maintainability and performance.*

Skills: React, Next.js, TypeScript, JavaScript, Node.js, SQL, REST APIs, Docker, Git, Agile (Scrum).

Managed and optimized warehouse and inventory management systems using Microsoft SQL Server, ensuring data integrity, system availability, and uninterrupted support for daily logistics operations.

- *Administered and maintained Microsoft SQL Server databases with over 500,000 records, performing SQL queries, data validation, and troubleshooting to improve data accuracy and support reliable business decision-making.*
- *Resolved technical issues for internal users, maintaining high system availability while collaborating with cross-functional teams to streamline workflows and improve the efficiency of internal business processes.*

Skills: *Microsoft SQL Server, SQL, Windows Server, IT Support, System Administration, Database Management, Troubleshooting, Process Optimization.*

Key Projects & Contributions

Intelligent Manufacturing System for Industry 4.0

Institute of Technology and Education Galileo of the Amazon (ITEGAM)

Jan 2026 – Jun 2026

Designed and developed an Industry 4.0 intelligent manufacturing platform that integrated IoT devices with real-time data processing, enabling continuous monitoring of industrial equipment and operational KPIs.

Key Contributions:

- Developed a real-time monitoring solution using Vue.js, TypeScript, Python, and PostgreSQL, enabling live visualization of machine data and production metrics.
- Integrated IoT devices with industrial systems to automate data collection and improve operational visibility across the manufacturing process.
- Applied data mining and analytics techniques to generate actionable insights, supporting predictive analysis and data-driven decision-making.
- Reduced report generation time by 40% by replacing manual reporting processes with automated real-time dashboards and analytics.
- Contributed to digital transformation initiatives by improving production monitoring, operational efficiency, and data reliability in an Industry 4.0 environment.

Technologies: Vue.js, TypeScript, Python, PostgreSQL, Git, IoT, Data Analytics, Data Mining, Real-Time Data Processing, Industry 4.0.

Intelligent Machine Parameterization System Using Artificial Intelligence for Industry 4.0

Institute of Technology and Education Galileo of the Amazon (ITEGAM)

Jan 2026 – Jun 2026

Contributed to the development of an AI-powered Industry 4.0 platform that optimized industrial machine parameterization, enabling data-driven decision-making and improving production efficiency through intelligent process automation.

Key Contributions:

- Developed intelligent features using Python, TypeScript, and PostgreSQL to automate machine parameter recommendations based on production data.
- Applied Artificial Intelligence and Machine Learning techniques to analyze operational data, supporting optimized machine configurations and reducing manual parameter adjustments.
- Improved process accuracy by 90% through AI-driven parameter optimization and data-driven operational recommendations.

- Integrated real-time monitoring and automation capabilities, enabling continuous tracking of machine performance and operational KPIs.
- Contributed to digital transformation initiatives by developing scalable AI-driven solutions that improved production reliability and operational efficiency in industrial environments.

Technologies: Python, TypeScript, PostgreSQL, Git, Artificial Intelligence, Machine Learning, Data Analytics, Industrial Automation, Industry 4.0.

Real-Time Intelligent Production Monitoring Front-End Interface for Industry 4.0

Institute of Technology and Education Galileo of the Amazon (ITEGAM)

Jan 2026 – Jun 2026

Contributed to the development of a real-time Front-End monitoring platform for Industry 4.0 environments, enabling intelligent visualization of production data, operational insights, and data-driven decision-making through interactive dashboards and advanced data visualization.

Key Contributions:

- Developed interactive dashboards using Vue.js and TypeScript to monitor production indicators, machine performance, and operational metrics in real time.
- Created data visualization components to improve production visibility, enabling faster analysis of industrial processes and supporting strategic decision-making.
- Implemented scalable Front-End solutions for real-time monitoring systems, integrating industrial data flows and optimizing user interaction with complex operational information.
- Contributed to digital transformation initiatives by developing intelligent interfaces aligned with Industry 4.0 concepts, smart manufacturing, and industrial automation.
- Improved production monitoring efficiency by 90% through optimized dashboards, real-time visualization, and enhanced access to operational insights.
- Collaborated with multidisciplinary teams to deliver technology solutions focused on process optimization, operational reliability, and industrial innovation.

Technologies: Vue.js, TypeScript, JavaScript, PostgreSQL, Git, Dashboards, Data Visualization, Real-Time Monitoring, IoT, Industrial Automation, Industry 4.0.

Education

Advanced English Program – ICBEU, Brazil (Graduated in 2018)

Bachelor of Computer Engineering – FAMETRO, Brazil (2019 – 2024)

Languages

English: Full professional proficiency

Portuguese: Native

Licenses & certifications

[Advanced English Program – ICBEU, 2018](#)

[Logic and Web Programming – Flexpeak, 2024](#)

[React.js Development – Flexpeak, 2024](#)

[JavaScript Fundamentals – Flexpeak, 2024](#)

[Web Development Fundamentals – Flexpeak, 2024](#)

Skills

TypeScript | JavaScript | React | Vue.js | Node.js | Python | HTML5 | CSS3 | SQL | PostgreSQL | MongoDB | REST APIs | Git | Docker | AWS | CI/CD | Microservices | Software Architecture | Design Patterns | Agile (Scrum) | Unit Testing | Full Stack Development | System Design | Jira | Problem Solving | Docker

Additional Information

- Fluent in Portuguese and Advanced English.
- Open to remote, hybrid, and international opportunities.
- Eligible to collaborate with distributed and multicultural teams.
- Research and Development (R&D) project leadership experience.
- Software registered with the Brazilian National Institute of Industrial Property (INPI).
- Strong background in Agile methodologies (Scrum) and collaborative software development.
- Passionate about software architecture, scalable applications, and continuous learning.
